Laser Technology Building Documentation Specialists

ATTENTION ARCHITECTS & ENGINEERS:

- **Do you require accurate drawings of existing buildings for renovation or restoration?**

  Replace cumbersome inaccurate data collection via tape measures, range finders and digital cameras. Laser scanning digitally captures all of the required information for:

  – Architectural and engineering design
  – Interior layout (machinery, work process flow, furniture, etc.)
  – Facade investigation (local law 10/11)

- **Do you need computer-ready information?**

  Our measurable 3D digital data guarantees +/- 1/8" accuracy; easily generates 2D CAD plans, elevations, section profiles, 3D geometric models and serves as a foundation for BIM (Building Information Models).

- **Why laser scanning?**

  Laser scanning develops highly detailed three dimensional replicas of the built environment in a matter of minutes. Large building facades can often be scanned without the use of extensive scaffolding. Existing rooms, finishes and complex geometries are fully documented and able to be analyzed. No time wasted on return visits for missed information; our scans record everything that's seen. Your designs can be planned to precisely fit existing conditions.

- **Do you need it yesterday?**

  Our technicians are on call 24/7 and can get to your site usually within 48 hours of your call. Our services are available anywhere in the United States or abroad.

ACCELERATE your schedule, MINIMIZE re-work and RECOGNIZE additional profit!
