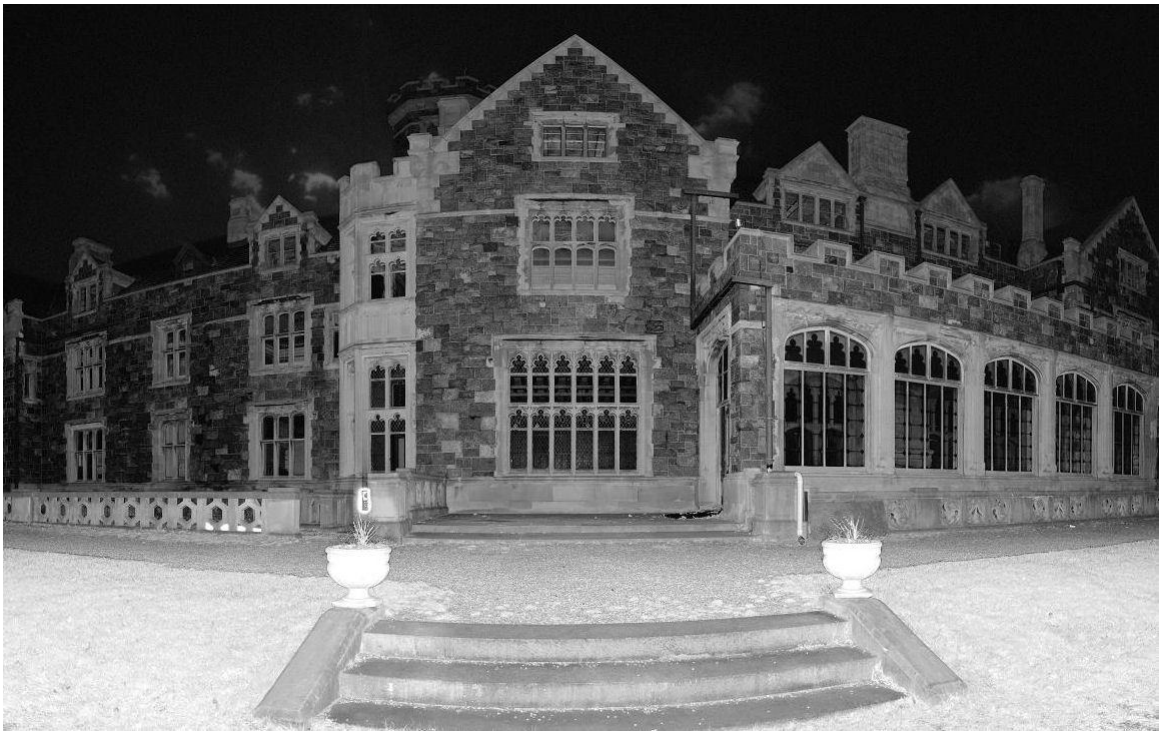
Providing precise information through laser scan technology and services

Corinthian Data Capture uses laser scan technology to provide computer-ready, digitized three-dimensional information of natural and man-made objects. Whether it's a building façade, street intersection, park landscape or an artist's sculpture, we provide data transformed into scalable drawings and computer images for your company or institution.

Our work is non invasive, and allows for a timely capture of information often without affecting workflow or access to the area scanned. We can safely and accurately provide 360 degree 3D images with millimeter accuracy for complex, unapproachable, or hazardous environments. Our services provide precise, annotated information to enhance coordination between all parties of a project, leading to shortened production times, improved quality and safety.


Corinthian Data Capture's unique blend of technology and professional expertise offers a service that allows all companies to benefit from enhanced operational support and reliable information. Contact Corinthian Data Capture today to learn how we can help you save time and money on your next project.
